TO THE PEOPLE OF THE WORLD: We are all sovereign members of the world. This is about MILITARY RESEARCH AT MCGILL UNIVERSITY [MONTREAL]. Onowarekeh, turtle island, is a Land of peace and shall remain so.

Demilitarize McGill explains, â??Conventional weapons kill people and demolish structures by creating an enormous amount of explosive force containing sharp and deadly fragments. Thermobaric weapons produce a blast wave that is of longer duration. Fuel-air explosives first saturates the air with fuel, creating a cloud that expands in many directions and flows around objects. A second charge ignites this oxygen-fuel mix creating a very large explosion and pressure that can knock down structures, destroy equipment and goods and incinerate people. The US developed these weapons for Vietnam and works with the Canadian military. McGill also works with the police and intelligence agencies through their Network Dynamics Lab. They research social responses to sudden and rapidly evolving social conditions, both terror and otherwise.

McGillâ??s School of Computer Sciencesâ?? researchers are building computers [Artificial Intelligence AI] on how different segments of the population respond to perceived crises. Its school creates an â??assessment systemâ?• on how different segments of the population are thinking and acting. Also being developed is â??mapping the distribution of features of communities of concern. An â??incident-specificâ?• tweet collection system is created for the

government.

MILITARY RESEARCH AT MCGILL UNIVERSITY [MONTREAL]

At least 6 labs are at McGill University carrying out research on behalf of weapons monopolies: particularly for drone warfare, missile guidance, domestic surveillance, explosives and air combat. The university has been fighting an Access to Information requested by members of Demilitarize McGill for internal communications on McGill military research since 2102. On June 21, 2016 McGill released 600 pages of documents related to the mechanical engineering laboratoryâ??s association with defence contractors. 90 per cent of the request for information has yet to be fulfilled. Below is information on some of the military initiatives and connections that activists have uncovered over the past several years.

MCGILLâ??S MILITARY ROBOTICS AND DRONE RESEARCH AEROSPACE MECHATRONICS LAB.

McGillâ??s Mechatronics Lab is involved in both developing of ground and airborne robots for combat operations through contracts with Defence Research Development Canada DRDC, an agency of the Department of National Defence DND. With Suffield Research Centre, they aim to â??study the enhancement of soldiersâ?? actions in combat missionsâ?• through unmanned technology.

Their interest is to develop technology for â??autonomous landing systems for unmanned aerial vehicles UAVsâ?• â??for decisiveinvolved inddy turbng comtssispaceonsâ?

ORATORYogy.

Lockheed Martin, and. McGill researchers are often private partner. They sell at least 21 distinct guided missile products â?? including the shoulder fired Javelin and air-to-ground Hellfire. The US and its allies use guided missiles developed by Lockheed Martin in such military campaigns as Iraq and Afghanistan. US military uses Hellfire missiles from Predator drones to deliver thermobaric payload targets.

HYPERSONIC WEAPONS.

The McGill Dept. of Mechanical Engineeringâ??s Shock Wave Physics Group is the longest standing military research lab at McGill. Particularly air-breathing propulsion for hypersonic weapons and thermobaric explosives. This is a system for propelling aircraft and missiles through continuous intake of air from the atmosphere during flight and composition creates combustion when the air reacts with the fuel.

McGillâ??s military-related research collaborate with DRDCâ??s Valcartier Research Centre on â??solid fuel projectiles with long-range, shorter time-to-target and increased kinetic energy for higher kill probability. This is part of the US development of Prompt Global Strike. This gives the US military the capability to strike anywhere in the world with a non-nuclear weapon within one hour of permission to launch.

What strikes us is that if we look at all military expenditures all legitimate needs of human kind are ignored. Instead the expenditure is on military whose major aim is to kill humanity. University students do not know what their academics are doing.

Buffy Sainte Marie agrees that we have to stop greed, corporate laws and fear from running and ruining the world.

â??Heâ??s five foot-two and heâ??s six feet-four. He fights with missiles and with spears. Heâ??s all of 31 and heâ??s only 17. Been a soldier for a thousand years. Heâ??a a Catholic, a Hindu, an Atheist, a Jain. A Buddhist, and a Baptist, and a Jew. And he knows he shouldnâ??t kill. And he knows he always will. Kill you for me, my friend, and me for you. And heâ??s fighting for Canada. Heâ??s fighting for France. Heâ??s fighting for the U.S.A. And heâ??s fighting for the Russians. And heâ??s fighting for Japan. And he thinks weâ??ll put an end to war this way. And heâ??s fighting for Democracy. Heâ??s fighting for the Reds. He says itâ??s for the peace of all. Heâ??s the one who must decide, Whoâ??s to live and whoâ??s to die. And he never sees the writing on the wall. But without him How would Hitler have condemned them at Labau? Without him Caesar would have stood alone. Heâ??s the one who gives his body as a weapon of the war. And without him all this killing canâ??t go on. Heâ??s the Universal Soldier and he really is to blame. His orders come from far away no more. They come from here and there and you and me. And brothers, canâ??t you see? This is not the way we put the end to warâ?•
